# AXOLUTE = ENERGY EFFICIENCY

## BTicino innovation, always more and more attentive to the environment

Respect for the environment and compliance with the new building regulations, saving energy without compromising on modern life comfort is today possible. BTicino offers solutions for an environmentally intelligent management of lighting, and for the control of domestic energy consumptions.

### ADJUST THE LIGHT LEVEL WITH MAXIMUM EFFICIENCY

With the new universal dimmer, it is also possible to control compact fluorescent lamps and LEDs, with current savings of up to 65%.

### Lower consumption, same light performance

With a constant 100 W light level (consumption of 100 W, filament = 70 W, halogen = 17 W LED), it is possible to obtain savings up to 65% by adjusting the dimmer to 25%.

ZONE TEMPERATURE CONTROL

### HEATING AND COOLING ONLY WHEN REQUIRED

With BTicino temperature control systems (both traditional and MyHOME) it is possible to:

- virtually set the temperature of each single room,
- split the system into zones,
- activate the heating only when required, preventing it from being switched on with the windows open.

In addition, thanks to the zone temperature control, the building gains one energy class and users save on their bills.

CONSUMPTION DISPLAY TOUCH SCREEN

### A COMPLETE ENERGY CONSUMPTION AND PRODUCTION CHECK-UP

Display the consumptions of your own home - electricity, water and gas - and the production of energy and hot water obtained with photovoltaic panels systems, or with solar thermal systems. The information can then be used to make your system as efficient as possible, reducing waste and faults.

### GREEN SWITCH: ILLUMINATION ONLY WHEN NEEDED

Green Switch is the intelligent state of the art solution for managing lighting without waste in the residential and service sectors. The light is switched on by the user and goes off automatically when no one is in the room.

# NEW ENERGY SAVING SWITCH

ENERGY SAVING SWITCH

## AN INNOVATIVE AND AT THE SAME TIME INTELLIGENT CONTROL:

works like a normal switch allowing manual switching on and off of the managed load but it can also switch the light off automatically if it is left on. When no movement is detected for 10 minutes this new switch will in fact independently deactivate the load to which it is connected. It is the ideal product in both new systems and when replacing existing controls. Also, it does not require a neutral wire, totally zeroing consumptions when the light is off.

Item  **TWO-WAY ENERGY SAVING SWITCH**

- HD4003ES
- HC4003ES
- HS4003ES

Two-way Energy Saving switch with presence detector. It works as a traditional 2 way switch (manual ON, manual OFF) but it will automatically turn off the light if it doesn't detect any presence for 10 minutes.

IR detection range, 8 meters, 160° - it is suitable with all type of loads that can be mixed on the same line:

- 12-150W: halogen or resistive loads
- 2-150VA: lamps with electronic or ferromagnetic ballast
- 8-30W (or 650 mA): LEDs or CFLs

Particularly suitable for places where a light can stay switched on for a long time such as garage and cellar, children's room, etc.

No neutral wiring, 127-230V, 2 modules.

Item **ELECTRONIC PUSHBUTTONS**

- HD4045
- HC4045
- HS4045

pushbutton sweet click 1P (NO) 1A 250V a.c. - built-in led

- HD4045V127
- HC4045V127
- HS4045V127

pushbutton sweet click 1P (NO) 1A 127V a.c. - built-in led

These minimum stroke activation pushbuttons can be used to control cyclical electronic relays, items HD4331V230-HC-HS4331/230 and HD4232V230-HC-HS4232/230. They can also be used to remotely control the dimmers (with dedicated thread), items HD/HC/HS4401. (See application diagrams). Items conform to BS EN 60 669-1.

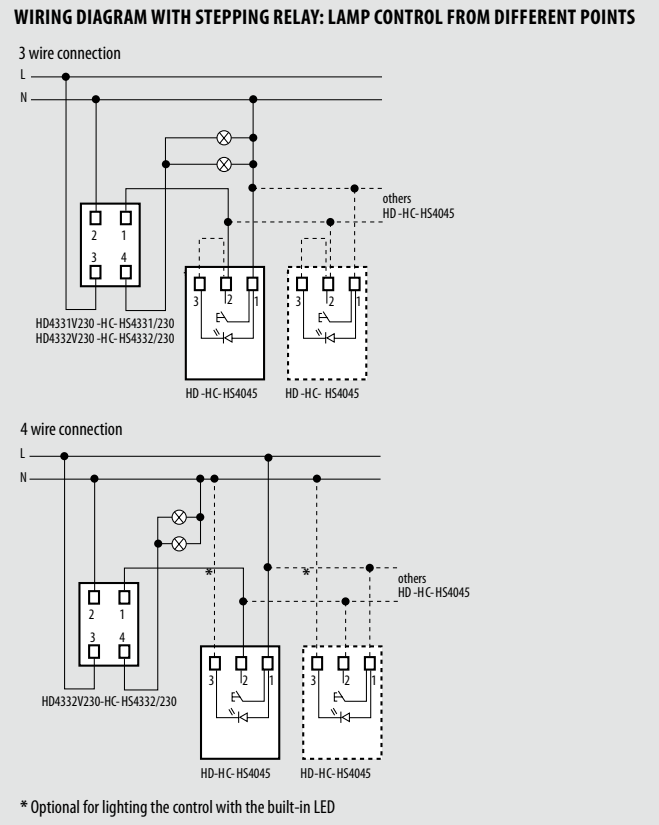

**TWO WAY ENERGY SAVING SWITCH WIRING DIAGRAM**

**NOTE:**  
Neutral NOT necessary.  
Zero consumption when the light is OFF.

The IR sensor is activated when the light is switched on from one of the two switches. The two-way energy saving can be installed both near or far from the load and it opens the circuit after 10 minutes with no movement detection.

The IR sensor of the two switches are both activated when the light is switched on. The light will switch off when one of the two switches stays 10 minutes with no movement detection.

### \* SCREWLESS TERMINALS CAGE CLAMP®S: WIRING EXCELLENCE

Innovative automatic terminal for rigid and flexible cables. The constant pressure on the cables guarantees optimal long-lasting contact: the problem concerning the half turn on the screw terminals is definitely solved.

- Simple and quick cabling: you just need to strip the cable and insert it directly into the terminal.
- Using a screwdriver for the opening will prevent accidental releases in boxes full of cables.

The two independent springs of the terminal guarantee a perfect grip for cables with different diameters, up to 2.5 mm<sup>2</sup>

### Example of cabling with rigid cable

After stripping the cable, put it directly into the terminal

Use a screwdriver to pull out the cable

► CAGE CLAMP®S is a registered trademark of **WAGO** Kontakttechnik GmbH, Germany!

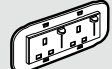

Before inserting the LED, detach the plastic tab and install the socket on the support.

# AXOLUTE MyHOME

## Benefits

Thanks to the MyHOME\_Up technology, it is now possible to design electric systems including new more advanced features in terms of comfort, safety, energy saving, audio/video communication, and local or remote control.

MyHOME\_Up is based on the use of one single system technology, the digital BUS, which can be used in any residential or service environment

A system made using MyHOME\_Up can be expanded at any time and integrated with the best technologies and systems and devices from other producers.

Eliot is the BTicino program dedicated to connected objects (Internet of things) which identifies all those products or systems which, because they can connect to the internet, give added value in terms of functionality, information, interactions with the environment and use.

## DIAGRAM OF USE OF THE GREEN SWITCH ITEM HD4658

**ECO MODE**  
Manual load switching on and automatic switching off by the dimmer/actuator, based on the detection of movement and the lighting level detected by the switch, item HD4658. The function of the switch is mainly to activate the automatism of the dimmer/actuator: on first pressure the sensor compares the desired light level with the actual light level inside the room, and decides if the lights must be switched on or not. A second pressure of the control, if desired, will force the switching on or off of the automatism set by the dimmer/actuator.

- 3) The transformer must be loaded at its rated power, or in any case never below 90% of its rated power. It will be preferable to use a single transformer, rather than several transformers in parallel. For example, it will be preferable to use one single 250 VA transformer with 5 x 50 W spotlights connected, rather than using 5 x 50 VA transformers in parallel, with one 50 W spotlight each.

### Notes:

1) Power factor corrected fluorescent lamps, energy saving lamps, discharge lamps. 2) In order to calculate the actual power of the load connected to the actuator, it will be necessary to take into account the transformer performance. For example, when connecting a dimmer to a 100 VA ferromagnetic transformer with 0.8 performance, the actual load power will be 125 VA. 3) The transformer must be loaded at its rated power, or in any case never below 90% of its rated power. It will be preferable to use a single transformer, rather than several transformers in parallel. For example, it will be preferable to use one single 250 VA transformer with 5 x 50 W spotlights connected, rather than using 5 x 50 VA transformers in parallel, with one 50 W spotlight each. 4) The symbol shown on the actuators refers to the shutter motor reducers. 5) Only compatible with lamps with 1/10 V Ballast.

## Matt white cover plate that can be painted

BEFORE PAINTING THE MATT WHITE - AW COVER PLATE

AFTER PAINTING THE COVER PLATE

### SUGGESTIONS FOR USE

The MATT WHITE cover plate can also be painted.

#### PAINTING

The matt white paint of the cover plates - **AW** - can be used as a primer. Before painting with house paint, the surface should be sanded/matted for better adhesion. Resin-rich products (e.g. water-based varnishes) should be used.

#### Notes

- Do not paint the devices (keys, sockets, etc.)
- Paint the cover plate separately and mount it when it is dry

#### CLEANING THE COVER PLATE

Water-based detergents should be used. Using ethyl alcohol or other solvents which could damage or soften the paint is not recommended.
